Q4 2024

CRT UNLOCKED

1A) Brain remapping.

The trading industry is full of one thing more than anything else... Lies and misinformation.
Before becoming successful as a trader, you need to understand the following: nearly EVERYTHING you hear and see is a lie.

The news you will read is a lie to make you feel a certain way, in order to manipulate your actions. (e.g. *There's bad news on Gold today, I'm going to sell*)

The candlesticks you see are lying to the majority of retail traders.

The teachings of classical technical analysis are lies designed to create liquidity.

The seniors in the field are mostly not what they seem to be.. A magician never shows how he does his tricks.

The information available is almost always false or missing.

It's one of the most forlorn industries that exist today.

However, there is a silver lining... One of the few truths that exist in the industry are CRT and turtle soup.
And you are lucky enough to be learning it right now.

The astute pupil will recognize this and dedicate his entire life to the craft, he is aware that he has stumbled across a hidden gold mine.

The lazy, arrogant and hasty will watch with a blind eye.

Each will reap what they sow.

Q4 2024

CRT UNLOCKED

1B) What is CRT?

“CRT” stands for candle (C) range (R) theory (T).

In summary: Every candle is a range. And every range can either be broken out of, or falsely broken through (turtle souped) and traded away from one end of the candle to the other.

After reading the above sentences and pairing it with the picture to the right, it should have clicked for some of you.

All everyone is ever trading is some range of some candle.

A swing trader holding for weeks is trading a monthly candle.

A short term trader holding for hours or days is trading a daily or a weekly candle respectively.

A scalper trading for minutes or seconds is trading 4 hour or a 1 hour candle.

Whether you know it or not, whether you like me or not, whether you agree with my personality or not, whether you even know me or not.. You are trading CRT. That is the level of control I have over these charts.

Might as well join the winning team.... no?

Q4 2024

CRT UNLOCKED

1C) Types of CRT:

The term “CRT” refers to the school of thought of every candle being a range.
Your job as a wannabe CRT trader is simply to focus on making this the entire personality of your trading.

Every trade you take should be framed using CRT as the basis.
Every trade idea you frame should be based on CRT.

There is always a higher timeframe candle being turtle souped and retraded into the 50% and the opposing end of said candle. This phenomenon is happening on every chart of every asset class every trading day on all timeframes. That is CRT.

Every trade you take within CRT shall be one of the following 5 types of CRT.
Think about what each type means and what it's like to trade each one.
How they're different, How they're similar. What are the subtypes? ..etc

These are all questions the astute pupil will ask themselves in order to achieve a complete understanding.

CR model.

Q4 2024

CRT UNLOCKED

1D) Secrets of the three candles

- Candle 1: Accumulation.
- Candle 2: Manipulation.
- Candle 3: Distribution.

This is the ideal scenario when it comes to a CRT trade.
The seasoned professional can trade all three, the intermediate student should look to trade candle 2 and 3, the beginner should look to anticipate and then capitalize on candle 3 onwards.

The missing element and the most important factor in any CRT trade is time.
Without the presence of time, your trade is a random, unrepeatable outcome.

Candle 1 is a specific candle, e.g. Monday.
Candle 2 is a specific candle, e.g. Tuesday.
Candle 3 is a specific candle, e.g. Wednesday.

Q4 2024

CRT UNLOCKED

1D) Secrets of the three candles

- Candle 1: Accumulation.
- Candle 2: Manipulation.
- Candle 3: Distribution.

Examples:

Week 1- Accumulation.

Week 2- Manipulation.

Week 3- Distribution.

Monday: Accumulation.

Tuesday: Manipulation.

Wednesday: Distribution.

.....

1D) Secrets of the three candles

- Candle 1: Accumulation.
- Candle 2: Manipulation.
- Candle 3: Distribution.

Examples:

09:00 – 09:30: Accumulation.

09:30 – 10:30: Manipulation.

10:30 – 11:00: Distribution.

01:00 – 05:00: Accumulation.

05:00 – 09:00: Manipulation.

09:00 – 13:00: Distribution.

Q4 2024

CRT UNLOCKED

1D) Secrets of the three candles.. The CRT trap.

Q4 2024

CRT UNLOCKED

1D) Secrets of the three candles, the CRT trap.

Take a look at the picture to the right.. Most of you would have expected it to trade lower to the CRT low... right?

Wrong.
This is the CRT market maker trap.

Specifically designed to trap CRT pattern traders, this trap will catch pattern traders off guard as they falsely expect prices to crash down to the CRT low, oblivious to the 50% rule.

The 50% rule: Always shave of 50% of your position at 50% of the CRT.
This is your insurance against the market makers' unpredictability.

If you're wrong, you get paid.
If you're right, you get paid more.
It is a win-win.

This is one of the most important pages in this scroll, but many of you will simply keep scrolling by blindly.
Keep reading...

1D) Secrets of the three candles.. CRT entry models.

Q4 2024

CRT UNLOCKED

1D) Secrets of the three candles, CRT entry models.

1- Model #1:

1A) Bearish model #1: Wait for price to stab into an old high using a thick up-close candle. Once they close below this up-close candle use it as an entry. They shouldn't trade back above it.

1B) Bullish model #1: Wait for price to dig into an old low using a thick down-close candle. Once they close above this thick down-close candle and leave an FVG, use it as an entry.

2: CRT OTE:

2A) Bearish CRT OTE: Wait for a true bullish shift in market structure with an impulsive leg that breaks the market structure. Wait for a deep retracement into the 50-886% of the leg for a continuation trade. Use CRT and a key level to identify true market structure shifts and true OTEs.

2B) Bullish CRT OTE: Wait for a true bearish shift in market structure with an impulsive leg that breaks the market structure and changes it from bearish to bullish. Wait for a deep retracement into the 50-886% of the leg for a continuation trade.

3: Kiss of death CRT: The latest and most satisfying entry.

3A) Bearish KOD turtle soup: After price has purged one side of the CRT (bearish Turtle soup at CRT high) and has traded to and closed below the 50% of the CRT, There will be one last accumulation before shooting off to the final target. There will always be one last turtle soup before the target.

3B) Bullish KOD turtle soup: Inverse 3A

CRT UNLOCKED

1D) Secrets of the three candles, SMT.

Q4 2024

CRT UNLOCKED

1D) Secrets of the three candles, SMT.

SMT is a crack in the correlation that occurs between asset classes.
It is one of the main indicators or a reversal, which also means it is an indicator for expansion.

It can be viewed as a secret signal smart money uses to indicate to each other when they will expand a certain asset class while leaving the high or low of another class without purging them.

One asset class purges the high and reverts, and the correlated asset class reverts without purging the correlated high (or low).

Examples of correlated asset classes:

- EUR-DXY
- ES-NQ
- BTC-ETH
- XAG-XAU

If DXY is bullish, EU and GU are bearish.

If a bearish NQ stabs into an old high and ES doesn't, expect a crash.

If a bullish BTC digs into an old low and ETH doesn't, expect both to rally with ETH leaving the low untouched.

If a bullish XAG fills a bullish FVG and accelerates away from it, expect a bullish XAU to rally without waiting for the bullish XAU FVG to fill.

The above is how to use SMT in general, but there's a more specific way to use SMT with CRT..

CRT UNLOCKED

1D) Secrets of the three candles, CRT SMT.

One specific candle turtle soups the high, while the correlated asset class' candle doesn't.

It's that simple.
That's CRT SMT.

Use the lower timeframe to frame the entry and ride it down to the 50% of the CRT and eventually to the opposing end.

It's that simple.
That's CRT SMT.

Use the lower timeframe to frame the entry and ride it down to the 50% of the CRT and eventually to the opposing end.

Q4 2024

CRT UNLOCKED

1E) ICT and CRT.

**ICT is a system heavily based on everything before it.
CRT is a system heavily based on ICT.**

**ICT is not a new invention; it is simply the summary and refinement on everything before it.
CRT is not a totally invention, it is simply the summary and refinement on ICT, a better version.**

**ICT is the old school TV which plays the video in colour but first requires various wires to be attached in a certain order in specific ports in order to display it.
CRT is the flat screen smart TV, shows better video quality in better colours with an easier mechanism.**

**The summary of ICT is OHLC.
The summary of CRT is using the times and liquidity pools to enter trades extremely accurately and take your piece of the pie.**

This is the extent of relationship between the two. Nothing more, nothing less.

CRT UNLOCKED

Section 2.

Q4 2024

CRT UNLOCKED

2A) What is trading?

What trading actually is, and what it's marketed to be are two very different things. It's marketed as a get rich quick scheme which will take you from debt to millionaire in the blink of an eye.

This could not be further away from reality.

The boring truth is that trading is just another tool you should use to make you money, arguably the easiest way to make the most money in the shortest period of time.

Compare this opinion with the commonly propagated view of it being an easy way to buy lambos and Rolexes while sitting in one of your sixty-five beach homes. More realistic... isn't it?

The first step to consistent profitability is understanding what trading is. Only once you understand it to be nothing more than a tool to make you money is when you're really on your path to profitability.

That's all it is, a money making tool at the disposal of whoever masters it. Nothing more, nothing less.

Q4 2024

CRT UNLOCKED

2A) Why most traders will always lose.

95% of traders lose money trading the financial markets. That number should scare you into wondering... why?

- Most traders are strategy hoppers.
- Most traders are unaware of how to collect the correct data.
- Most traders lack self awareness.
- Most traders lack self discipline.
- Most traders lack logical thinking.
- Most traders ride emotional roller coasters all week long.

Looking at it from a purely technical standpoint, all of the above can be summarized in the following:
Most traders try a strategy, succeed a few times, fail a few times, leave the strategy and look for the next big thing.

Does the above cycle of a failed trader sound familiar or relatable?
If it does, you're a failure.

The cycle of a losing trader will never change. It will always remain this way.
It's the same reason most people are physically unfit while knowing what they need to do to be fit.

You already know what you need to do, you're just too lazy to do it.

Q4 2024

CRT UNLOCKED

2A) The importance of journalling.

Knowledge is the prey and the pen is the lasso. Catch your prey with thick ropes.

A doctor has his medical records. An engineer has his graphs, A lawyer has his files of evidence and other records. Every profession has some sort of written method to record the operations carried out by the professional.

Professional trading is no different.
Every professional needs a journal.

The purpose of the journal is NOT to make you feel better about yourself because you did something, that's what the majority do and why the majority fail. The purpose of a trading journal is simple: Use the feedback from your mistakes to not repeat them ever again.

All of you have made mistakes.
Yes, even me.

All of you have participated in great trades.

Every trader that ever traded the financial markets suffered from both wins and losses. Why then do some win and the majority lose?

Think.
Think a bit more..

The answer is simple: The profitable trader is an unprofitable trader that fixed their mistakes.
This is the importance of the trading journal.
